Directorate-General for Informatics (DIGIT)

National Interoperability Framework Observatory

NIF Analysis

Dear NIF representative,

As part of the ISA programme of the Commission, we are currently conducting a new process to update the National Interoperability Framework. You have been requested to submit your MS' National Interoperability Framework and other initiatives on interoperability as input for analysis. This document includes the preliminary results of the analysis, to be integrated by your inputs. The analysis includes an observatory of all artefacts and level of monitoring and implementation.

We would like to kindly request you to **verify** the analysis of your MS' NIF and related initiatives and integrate it to ensure that the study team

[The structure of this document is explained here.](#)

Analytical Model

Objectives

The objectives of the NIFO are:

- (1) the exchange of information on national interoperability frameworks;
- (2) to help Member States aligning the national interoperability initiatives to the EIF.

As an observatory, the NIFO should by definition observe all the actions and initiatives on interoperability the MS' are pursuing. In order to do so, it will observe all items currently present in the different NIFs and to highlight the alignment of the different NIFs with the EIF as well as their level of implementation. The items presented in the MS' NIFs and related initiatives can be classified. The recommendations found in the EIF are an integral part of this analysis to highlight their current alignment with the EIF and to improve the degree of implementation and monitoring.

Structure of this document

This document includes four tabs:

Analysis MS

NIF-EIF Alignment

NIF Implementation

NIF Monitoring

The 'Analysis MS' sheet contains an analysis of all items observed in the MS' National Interoperability Framework.

The '**NIF-EIF Alignment**' sheet provides a numerical representation of the alignment of the MS' NIF with the EIF. This representation is solely for information purposes.

The '**NIF Implementation**' sheet provides a numerical representation of the implementation of the MS' NIF.

The '**NIF Monitoring**' sheet provides a numerical representation of the monitoring of the MS' NIF.

The numerical representation will **not** be used for comparison ranking the different Member States.

Analysis MS

The '**Analysis MS**' sheet represents the analysis of the MS' NIF. The table contains the following columns:

EIF Element - Reference - Category	This column displays the different principles and recommendations found in the EIF and the related initiatives.
Measurement	This column displays how the alignment between NIF-EIF will be measured.
NIF element present - Reference - (Text in English)	This column explains if the element is present in the NIF (or applied by default through other legal acts).
NIF original text (optional)	Many of the NIFs and related documents are written in the national language, it is often useful to provide the original text.
NIF-EIF alignment scoring 2: fully 1: partially 0: not aligned	If a specific element provides evidence for the NIF-EIF alignment, a score is given.
Rationale	A rationale is provided to clarify the scoring, indicating the score itself.
Large scale implementation	This column displays evidence of large scale implementation of the NIF element.
Only implementation examples	This column and its 3 sub columns display evidence through examples of practical implementation.

NIF In	Implementation scoring
--------	------------------------

If a specific element provides evidences for the NIF implementation, a score is given.

NIF monitoring	NIF monitoring
NIF monitoring	Monitoring scoring

The 'NIF Element monitored' Column contains information on how the MS is monitoring the us

If a specific element provides evidences for the NIF monitoring, a score is given.

Scoring mechanism

As stated above, all evidence provided by the MS should be interpreted in order to give a scoring to the particulare element. More specifically, the following scoring scale will be applied:

<p>NIF - EIF alignment</p> <p>0 = not aligned</p> <p>1 = partially aligned</p> <p>2 = fully aligned</p>	<p>Implementation</p> <p>0 = not observed</p> <p>1 = some examples</p> <p>2 = common practice (large scale implementation)</p>
--	---

NIF-EIF Alignment

The '**NIF-EIF Alignment**' sheet represents a numerical representation of the alignment of the MS' NIF with the EIF. It is organised around the five dimensions/categories of the EIF: Principles, Conceptual Model, Interoperability Levels, Interoperability Agree Each dimension/category contains a number of specific elements allowing to measure the NIF-EIF alignment. A graphical representation highlights the alignment of the MS' NIF with the EIF.

Category	EIF Element
Principles	Subsidiarity and proportionality
	User-centricity
	Inclusion and accessibility
	Security and privacy
	Multilingualism
	Administrative simplification
	Transparency

Example of a specific EIF dimension/category and its elements.

NIF Implementation

The '**NIF Implementation**' sheet is a numerical representation of the implementation of the NIF. It is organised around the five dimensions/categories of the EIF: Principles, Conceptual Model, Interoperability Levels, Interoperability Agree Each dimension/category contains a number of specific elements allowing to measure the NIF implementation and monitoring. A graphical representation highlights the NIF implementation.

Category	EIF Element
Principles	Subsidiarity and proportionality
	User-centricity
	Inclusion and accessibility
	Security and privacy
	Multilingualism
	Administrative simplification
	Transparency

Example of a specific EIF dimension/category and its elements.

NIF Monitoring

The '**NIF Monitoring**' sheet is a numerical representation of the monitoring of the NIF. It is organised around the five dimensions/categories of the EIF: Principles, Conceptual Model, Interoperability Levels, Interoperability Agree Each dimension/category contains a number of specific elements allowing to measure the NIF monitoring.

A graphical representation highlights the NIF monitoring.

<p>See reference: the European Interoperability Framework v2</p> <p>See definitions listed in the ISA EIF brochure</p>		<p>NIF element present - Reference - (Text in English)</p>	<p>NIF-EIF alignment scoring 2: fully 1: partially 0: not aligned</p>	<p>Large scale implementation [describe if and how implementation of the element is a common practice]</p>	<p>Only implementation examples [describe an implementation example specific to each element]</p>	<p>Implementation scoring 2: Common practice 1: some examples 0: not observed</p>
<p>Subsidiarity and proportionality EIF, Chapter 2, Underlying principles Category: Principles</p>	<p>Ref:</p> <p>The EIF is translated and described in a local country framework, namely NORA (Nederlandse Overheid Referentie Architectuur):</p> <ul style="list-style-type: none"> - NORA is primarily concerned with the 'information' and interoperability aspect, with due regard for the principle of subsidiarity. NORA is referred to as the Dutch Interoperability Framework. - Nora describes norms and measures relevant for involved parties. The different organisations are free to build further on this baseline to include internal quality aspects. <p>See www.noraonline.nl</p>	<p>2</p>	<p>NORA is the national information framework of the Netherlands. All governmental domains like the global government, the provinces, the municipalities, and so on use their own specific IF's which ought to be derivate family members from NORA, like 'Matryoshka Nesting Dolls'.</p> <p>http://noraonline.nl/wiki/Visie_op_dochters</p>	<p>See for example www.earonline.nl or www.gemmaonline.nl, which are the IF's of the global government and the municipalities.</p> <p>See all other implementations http://noraonline.nl/wiki/Tabel_met_alle_dochters</p>	<p>2</p>	
<p>User-centricity EIF, Chapter 2, Underlying principles Category: Principles</p>	<p>The EIF is translated and described in a local country framework, namely NORA (Nederlandse Overheid Referentie Architectuur). The basic principles of NORA include:</p> <ul style="list-style-type: none"> - Proactive - users will be provided with the service they need - Packages - users are offered related services as a package. When services, or their component parts, are closely related as seen from the user's perspective - they are offered to users as a package. The user gets the impression that they are just one single service. - Open to feedback - users can provide input about the service. Users can submit corrections, complaints, etc. to the service provider, either on request or on their own initiative. <p>See http://noraonline.nl/wiki/Principes</p>	<p>2</p>	<p>The vision document 'better government services and action plan e-Government services' states that the government must put the citizen central to service delivery. It provides examples of eGovernment services where this principle has been implemented, including:</p> <ul style="list-style-type: none"> - Digital client dossier: electronic forms have been made available and are prefilled, ensuring one-time request for information and reducing administrative burdens, it has also led to rationalisation of request for evidence and contributed to shorter for - Answers for Businesses: the Dutch Point of Single Contact provides a single electronic platform for businesses where all relevant information is provided procedures can be fulfilled electronically (see: http://www.answersforbusiness.nl/). <p>See: http://e-overheid.nl/images/stories/Publicaties/visieenactieprogrammabeterepubliekdienstverlening.pdf</p>	<p>2</p>
